

Leotek in the Windy City: One of the country's largest street light modernization programs is nearing completion.

After a rigorous qualification process, Leotek's Green Cobra streetlight was selected for arterial roadways and alley applications.

The City of Chicago, Illinois is completing one of the largest lighting modernization projects in the U.S. this year. The initiative will eventually replace over 270,000 existing outdated HPS light fixtures with new LED lights. "We are proud that the City and their contractor, Ameresco selected Leotek and we have enjoyed our successful working partnership these last few years", says Leotek's Director of Sales, John Brown.

The Green Cobra family is Leotek's flagship street light product and is offered in four sizes. In addition to offering industry-leading efficacies, the GC is built with premium components, and is backed by an unsurpassed ten-year standard warranty. To ensure long life, Leotek is the only manufacturer who performance tests for 2 hours 100% of all luminaires prior to shipment. The Green Cobra is built in Leotek's San Jose, California factory.
